

### Problem:

Our company needs to have a **web presence** that is easy to implement, maintain, and is a cost effective solution.

### Solution:

The ESW SmartSite Web Service gives you 100 percent control of your website. As a web-based application, changes to the website content can be made from anywhere you have Internet access. Typically, a company hires a web programmer to make changes to their website, and then have to rely on their availability. By leveraging SmartSite, **you are in control** because changes are made on your schedule.

The ESW SmartSite system consists of numerous modules with features as simple as a text editor to as complex as a survey. Custom modules can also be developed and implemented with no downtime.

Project Based Services ~ SmartSite
